THE PREDICTIVE POLICING COMPANY."

ATTACHMENT A

SERVICES

The Company: PredPol, the predictive policing company, provides high-precision, micro-place predictions for where and when crime is most likely to occur. This includes property crime, gun violence, gang activity, and traffic accidents. PredPol's cloud based software-as-a-service (SaaS) has been deployed for several dozen U.S. and international law enforcement agencies, but also accurately predicts a variety of other incidents, including IED and terrorist activity in an active theater.

Problem Addressed: Law enforcement agencies face tight budgets and hiring limits. Over the last decade, they have been asked to do more with less, forcing them to allocate resources more efficiently. PredPol's proven patent-pending prediction technology, developed with cops for cops, provides automated predictions by time of day that command staff, analysts, and line level officers can use to focus their patrols. PredPol's accuracy and crime reducing effects have both been proven in studies with LAPD and with the Kent (England) Police.

The Service: PredPol's product is its patent-pending law enforcement predictive software as a service that includes PredPol's cloud applications, PredPol's data pipe applications, and any other crime-related applications that may be provided by PredPol from time to time. Part of this technology is provided by PredPol under an exclusive license from Santa Clara University in Santa Clara, California, while other aspects of the technology were created by PredPol itself.

PredPol's predictive tool integrates seamlessly with agency RMS/CAD systems with automatic updates as an agency updates its records. It's accessible by printing results on paper and on any internet-connected device, whether desktop, laptop, tablet, smartphone, or in-car display. PredPol's API allows it to integrate with any RMS/CAD system, as well as any existing agency application, such as data warehouse browser, mapping technology, or analytic dashboard.

Scope of Work: PredPol shall provide services, resources, and tools to support a successful implementation of a proprietary, patent pending SaaS application that supports a police department's efforts to predict, deter, and reduce crime. The scope of work will include the following:

- Setup of and integration of the PredPol tool into UCPD's existing RMS/CAD/Data system. Timeline for setup dependent upon grant of access by UCPD to PredPol's technician for installation of the data pipeline.

- Installation of a data pipe from UCPD to the PredPol SaaS. Frequency of data update (daily, hourly, every few minutes) is dependent on the degree of access granted to PredPol to stream data from UCPD.
- Provide Command, Analysts and Supervisors with best practices guidance.
- Full UCPD access to the tool, including unlimited prediction views, refreshes, and report generation.
- Provide electronic transfer of 500 square foot predictive locations (latitude and longitude data) identified by PredPol.com to UCPD for electronic consumption by UCPD's computer systems. The details of the data exchange will be determined through conversations with UCPD's information technology staff and depend on UCPD's existing RMS/CAD/Data system and its existing mapping technology, if any.
